Gross value added - Agriculture, hunting and fishing

At current basic prices and current exchange rates (% of all branches)

Gross value added (GVA) is defined as the value of all newly generated goods and services less the value of all goods and services consumed as intermediate consumption. The depreciation of fixed assets is not taken into account. Gross value added is compiled according to the industry that created it. Here, the A6 breakdown derived from the NACE Rev. 1 is used.

Gross value added - Business Activities and financial services

At current basic prices and current exchange rates (% of all branches)

Gross value added (GVA) is defined as the value of all newly generated goods and services less the value of all goods and services consumed as intermediate consumption. The depreciation of fixed assets is not taken into account. Gross value added is compiled according to the industry that created it. Here, the A6 breakdown derived from the NACE Rev. 1 is used.

Inequality of income distribution

Income quintile share ratio

The ratio of total income received by the 20 % of the population with the highest income (top quintile) to that received by the 20 % of the population with the lowest income (lowest quintile). Income must be understood as equivalised disposable income.

GDP per capita in PPS

GDP per capita in Purchasing Power Standards (PPS) (EU-27 = 100)

Please be aware that this indicator has been rescaled, i.e. data is expressed in relation to EU-27 = 100. Thus, they are not comparable with previous releases based on EU-25 = 100.

Gross domestic product (GDP) is a measure for the economic activity. It is defined as the value of all goods and services produced less the value of any goods or services used in their creation. The volume index of GDP per capita in Purchasing Power Standards (PPS) is expressed in relation to the European Union (EU-27) average set to equal 100. If the index of a country is higher than 100, this country's level of GDP per head is higher than the EU average and vice versa. Basic figures are expressed in PPS, i.e. a common currency that eliminates the differences in price levels between countries allowing meaningful volume comparisons of GDP between countries. Please note that the index, calculated from PPS figures and expressed with respect to EU27 = 100, is intended for cross-country comparisons rather than for temporal comparisons.
