Notes: ¹ Year of entry into the Eurozone. ² Forecasts by EC pr 26 April 2012. ³ Forecasts outlined by the bailout plan in March 2012. ⁴ Calculated by the EDP method.⁵ Calculated in 1970-1995 as yoy %-change of the GDP deflator index in National Currency.⁶ Calculated in 1996-2007 as the difference between yoy rates of: "marketprice GDP" and "real GDP" in National Currency.⁷ Calculated in 1970-1995 as the difference between the "yoy %-change of marketprice GDP" and the yearly "GDP deflator" in National Currency.⁸ Targets in the bailout plan require the Greek government soon to implement a fiscal consolidation, minimizing the deficit to 4.7% of GDP in 2013

However, German Chancellor Angela Merkel and former French President Nicolas Sarkozy have said on numerous occasions that they would not allow the eurozone to disintegrate and have linked the survival of the Euro with that of the entire European Union.^{[314][315]} In September 2011, EU commissioner Joaquín Almunia shared this view, saying that expelling weaker countries from the euro was not an option: "Those who think that this hypothesis is possible just do not understand our process of integration".^[316]
